MUKANDU[®]

Company
Profile

MUKANDU was created by its founder and C.E.O, Mr. Yannick K. Okuka to fulfil the much needed gap within the design-engineering-construction sector in the Democratic republic of Congo. We strive for efficiency and excellence in all our efforts. Be it from the design process to the construction phase, we coordinate our team to participate by withholding high standards, always.

 **MUKANDU**

The complexity of buildings today brings the need of collaborations with various disciplines when designing a structure. At **MUKANDU** we collaborate with architect, civil-structural-electrical engineers to derive the most effective and efficient productive process. With the use of collaborative softwares we are able to conceptualise, plan, design and execute as a collective and provide the most appropriate solution for our clients.

▶ **ARCHITECTURE**

▶ ENGINEERING

Engineering is a broad discipline which is often broken down into several sub-disciplines. At **MUKANDU** we focus on a multi-disciplined approach through experience. Our main branches of engineering are Civil engineering, Electrical engineering, Structural engineering, Environmental engineering and Surveying. As with all modern scientific and technological endeavours available today, **MUKANDU** uses the latest software which play an increasingly important role in our consultation process.

At **MUKANDU** we are a Design-Build company (D&B), where we are contracted by a single entity to both provide a design and to build that particular design. Our construction approach formulae consist of (i) Architectural and Engineered plans, (ii) Quantitative and Juristic documentation, and (iii) Management procurement and Construction. We find our synergy when design, legal, finance and construction aspects overlap and interrelate. This interaction of expertise gives us a structurally sound, financially feasible and legal to use infrastructure.
